

## PROCESS

EAF Dust (Electric Arc Furnace Dust) is an extremely dusty by-product of the steel making process. The customer desired to reduce the dustiness of the material, while at the same time, increasing the size of the pellets so they would more effectively be processed later in the system. FEECO provided the equipment, as well as assisted with the process start-up and process development.

## PROJECT SPECS

**Customer:**

Major US Minerals Recycler  
(Proprietary)

**Equipment Supplied:**

- (2) 14' (4.2m) Disc Pelletizers
- (2) 18' (5.5m) Disc Pelletizers
- Belt Conveyors

**Project Location:**

Illinois  
Pennsylvania  
South Carolina

**Industry:**

Metals Recycling

**Material:**

EAF Dust  
(Electric Arc Furnace Dust)

**Project Engineer:**

FEECO International, Inc.
