

PROCESS

FEECO supplied multiple disc pelletizers for the pelletization of glass.

Seattle Batch was producing custom glass colors and blends for the blown glass industry. However, their precise formulations were being thrown off, because glass fines were becoming entrained in the air flow of the melting furnaces. This ultimately resulted in inconsistencies in their glass blends.

FEECO worked with the company to pelletize their glass fines, ensuring that formulas remained intact during processing.

PROJECT SPECS

Customer:

Seattle Batch

Equipment Supplied:

- 16" (406mm) Disc Pelletizer
- 4'6" (1.3m) Disc Pelletizer

Project Location:

Seattle, WA, USA

Industry:

Glass

Material:

Glass

Project Engineer:

FEECO International, Inc.
