

*FEECO can optimize your company's equipment or process system:  
Any brand, Anytime, Anywhere!*

FEECO International has over 65 years of experience delivering aftermarket process audits and engineering services. Our Aftermarket Engineering Team can analyze everything from complete process systems to a single piece of equipment.

### **AFTERMARKET SERVICES**

Having tested and designed pilot plants for thousands of material samples, as well as manufacturing the custom equipment needed for full-scale production, FEECO has a unique experience in delivering process solutions. And while many manufacturers will only service their own brand of equipment, FEECO's Aftermarket Engineers offer a complete line of services for **any brand of equipment**, including:

#### **Complete Process & Equipment Audits:**

We can analyze how your process functions as a whole, as well as individual pieces of equipment, in order to identify operational bottlenecks, improve online availability, and address regulatory compliance issues.

In addition to valuable benchmark data, audits provide a comprehensive report including short and long-term recommendations.

**Retrofits:** We can custom manufacture a retrofit solution to integrate seamlessly into your process, resolving identified process or operational issues.

#### **Process Optimization & Testing:**

We offer full process design modeling capabilities to fine-tune existing systems, or evaluate a system's ability to handle a change in production capacity or other new process requirements.

*"One of the advantages to being the leader in your industry, is that you have the oversight and the experience to look at any process or piece of equipment, and see what needs improvement. That's what makes FEECO unique."*

- Craig Peppin  
Customer Service Manager

## WHO WE WORK WITH

FEECO's expertise has been sought by everyone from start-ups to Fortune 100 companies seeking innovative solutions in process design, engineering, and manufacturing for a variety of industries. Some of these companies include:

## FIELD SERVICES

In addition to the capabilities listed here, our Aftermarket Service Engineers also provide a broad range of field services, whether you need to get outdated equipment up and running, or are just looking to keep your equipment performing in optimal condition. This includes:

- Annual Inspections
- Tire and trunnion wheel grinding
- Alignments
- Gear/Tire replacement
- Customized training programs at your site or at the FEECO Innovation Center
- Full complement of spare and replacement parts for FEECO systems as well as equipment from other manufacturers

Whatever your needs may be from an aftermarket parts, service, or process optimization engineering standpoint, FEECO International has the experience, personnel, and capabilities to provide a complete package that's tailored to your specific application and requirements.

We specialize in solutions for agglomeration/granulation, thermal processing, and material handling equipment, including, but not limited to the following industries:

- Mining and Minerals
- Power Generation
- Fertilizer and Agriculture
- Waste Incineration, Environment and Recycling
- Pulp and Paper
- Chemical

We can service any brand of equipment in the following categories:

### Thermal Processing:

- Rotary Dryers & Coolers
- Rotary Kilns

### Agglomeration/Granulation:

- Agglomeration Drums
- Granulation Drums
- Coating Drums
- Disc Pelletizers
- Pin Mixers
- Pug Mills/Paddle Mixers
- Hammer/Chain Mills
- Compactors
- Briquetters

### Material Handling:

- Belt Conveyors
- Steep Incline Conveyors
- Reversing Shuttle Conveyors
- Bucket Elevators
- Belt Trippers and Plows
- Belt Feeders
